The same brain cells that track location in space appear to also count beats in time. The research suggests that our thoughts may take place on a mental space-time canvas. Our brains have an extraordinary ability to monitor time. A driver can judge just how much time is left to run a yellow light; a

The amount of energy infusing empty space seems too small to explain without a multiverse. But physicists have at least one alternative left to explore. The controversial idea that our universe is just a random bubble in an endless, frothing multiverse arises logically from nature's most innocuous

Why the Dark Energy Problem Spawned the Multiverse

In physics, a quantum (plural: quanta) is the minimum amount of any physical energy (physical property) involved in an interaction. The fundamental notion that a physical property may be "quantized" is referred to as "the hypothesis of quantization". This means that the magnitude of the physical property can take on only discrete values ...

Gravitational waves can penetrate regions of space that electromagnetic waves cannot. They are able to allow the observation of the merger of black holes and possibly other exotic objects in the distant Universe.

Surprisingly there are not many good videos that explain Einstein's relativity. The following video is a bit boring and incomplete, but it does make some of the basics clearer than other sites.

Introduction. The hypothesis of three dimensional time arises from a consideration of the following two principles: - "If quantum gravity fails, try geometrizing the quanta."
