One of the very foundations of evolution and popular science today is the "geologic column." This column is made up of layers of sedimentary rock that supposedly formed over millions and even billions of years.

The Geologic Column - Naturalism and The Theory of Evolution

The biological and geological future of Earth can be extrapolated based upon the estimated effects of several long-term influences. These include the chemistry at Earth's surface, the rate of cooling of the planet's interior, the gravitational interactions with other objects in the Solar System, and a steady increase in the Sun's luminosity.
